

BIOGRAPHY

Dr. Gerald M. Mulenburg,
Senior Analyst in the Systems Management Office,
NASA ARC

Jerry has over 30 years of Project Management experience with the Air Force, Navy, Stanford University, and NASA. During that time, in addition to managing research hardware development projects, he has been involved in teaching university level project management and in studying the characteristics of project managers. He is currently Senior Analyst in the Systems Management Office at the NASA Ames Research Center and is involved in creating a project manager training program, developing engineering training and career progression, and in Project Management Office development.

Prior to his current position, he managed the NASA Ames Hardware Development Division responsible for creating airborne, space flight, and ground research systems and equipment. He also served as Executive Director of the California Math Science Task Force and as Assistant Director of the Lawrence Hall of Science. He is the author of numerous technical papers on project management, hardware development, and management issues.

He is an active member of the Project Management Institute and the Product Development Management Association. His academic degrees include Aerospace Engineering, Mechanical Engineering, Systems Management, and a Doctorate in Business Administration with his dissertation a study of the characteristics of NASA project.
